

BY ORDER OF HIS ETERNAL UPTIME

DECREE

UPON TWO-FACTOR AUTHENTICATION

THE SECOND FACTOR

Passwords are stolen from companies in their millions and sold on. A second factor is one more check when you log in: it is why this thief is still outside.

WHAT BEATS A PASSWORD ALONE

- ✗ A password on its own Not a second factor. Whoever buys it can log in as you.
- ✓ A code sent by message **Better than nothing.** Texts can be redirected to a thief.
- ✓ A code from an app **Good.** The code is made on your phone, not sent to it.
- ✓ A passkey **Good, and free.** Nothing to type and nothing to steal.
- ✓ A key you tap or plug in **Best.** A thief would need it in his hand.

Start with your email, then banking. Your email can reset everything else.

TURN IT ON WHEREVER IT IS OFFERED. IT TAKES ABOUT A MINUTE AND IT STOPS A THIEF WHO ALREADY HAS YOUR PASSWORD.

REWARD: HE WEEPS AT YOUR GATE
